Sirs,
Attached are the review comments from AED.
A "B" code was received, we may proceed to the 99% design phase.

ECCI made many corrections to the documents submitted by your design team in order to properly respond to the DR Check comments. We also had an ECC engineering team work on the ducted HVAC design for the:
DFAC
Training Building
Open Bay Barracks
Headquarters Administration Building

The ECC team will continue to work on the HVAC for those 4 buildings on your behalf, the AWCC design team will not be required for this portion of the work.

Everyone, please note that the second floor on the Admin Building has been deleted. Please revised all documents as required.

AWCC please send some one to the ECCI office and we will provide a CD with a copy of the documents that were submitted to AED so that your design team can continue working toward the 99% design submittal.

Regards
Joe H.
